can enhance
shelf life of
food

better
understand
food and
package
interaction

Learn
packaging
requirements
for food &
related
standards

Introduction to
packaging
economics,
purchasing,
sustainability
and regulations

Course Overview:

This Food Packaging Basics course is designed for those professionals who desire an overview and update on food packaging. The course will discuss the chemical and physical properties and the manufacturing of basic materials (polymers, fibers, metals, glass, and composites) that are used to construct packaging.

Examples of packaging technologies are presented with emphasis on newer technologies. This course will also discuss producing standard packaging materials locally.
